

Faces Config Structure - Converter

The converter element represents a specific *Converter* implementation class.

General

Item	Description
Id	Stands for <converter-id>. Represents the identifier under which the corresponding Converter class should be registered. Converter identifiers must be unique within the entire web application.
Class	Stands for <converter-class>. Represents the fully qualified class name of a concrete Converter implementation class.
For Class	Stands for <converter-for-class>. Represents the fully qualified class name for which a Converter class will be registered.
Display Name	<display-name>: a short name describing the entity associated with the converter.
Description	<description>: contains textual description of the converter.
Small icon / Large Icon	<small-icon> / <large-icon>. Contains the resource path to an (16x16)/(32x32) icon image. The image may be in either GIF or JPG format.

Facets / properties / attributes

Item	Description
Properties / Attributes	<p>The property element represents a JavaBean property of the Java class represented by the component. The attribute element represents a named, typed, value associated with the parent <code>UIComponent</code> via the generic attributes mechanism. Attribute names must be unique within the scope of the parent (or related) component.</p> <ul style="list-style-type: none">■ Name: Stands for <attribute-name>/<property-name>. Represents the name under which the corresponding value will be stored, in the generic attributes/properties of the <code>UIComponent</code> we are related to.■ Class: Stands for <attribute-class>/<property-class>. Represents the Java type of the value associated with this attribute/property name.■ Default Value: Stands for <default-value>. Contains the value for the attribute/property. This value differs from the "suggested-value" in that the attribute/property must take the value, whereas in "suggested-value" taking the value is optional.■ Suggested: Stands for <suggested-value>. Contains the value for the attribute/property.■ Display Name: Stands for <display-name>. Contains short descriptive name describing the entity associated with the attribute/property.■ Description: Stands for <description>. Contains a textual description of the attribute/property.

- **Small Icon / Large Icon:** Stands for <small-icon>/<large-icon>. Contains the resource path to an (16x16)/(32x32) icon image. The image may be in either GIF or JPG format.
