

## Files/Folders Default Permissions Dialog

---

This dialog opens when you select the **Override default permissions on files** or **Override default permissions on folders** check box in the [Options](#) dialog and click the **Browse** button  next to it.

Use this dialog box to re-assign default server [permissions](#) to owners of files or folders, groups of owners, and other users.

The following identifiers are used for permission types:

- **R** stands for **Read**.
- **W** stands for **Write**.
- **X** stands for **Execute**

Item	Description
Owner	In this row, specify what an <a href="#">owner</a> of a file or folder may do by selecting the check boxes below the corresponding identifiers.
Group	In this row, specify what a group of owners of a file or folder may do by selecting the check boxes below the corresponding identifiers.
Others	In this row, specify what any one else may do by selecting the check boxes below the corresponding identifiers.
Octal	In this text box, specify the <a href="#">octal representation</a> of the specified set of permissions. By default, IntelliJ IDEA calculates and re-calculates the value of the field as you select or clear the desired check boxes. You can also specify the octal value manually.
