

Filtering Dependencies

Using [JetGradle tool window](#), you can view only the desired dependencies, and hide all the rest.

To filter dependencies

- In the [JetGradle tool window](#), click a color-code icon that corresponds to type of dependencies you want to show.

For example:

- If you want to show only those nodes that contain conflicts, press .
- If you want to show only those nodes that are defined in IntelliJ IDEA project but are missing in Gradle project, press .
- If you want to show only those nodes that are defined in Gradle project but are missing in IntelliJ IDEA project, press .
- When all buttons are pressed (or released), then all nodes are displayed.
