

## Find Usages. Method Options

---

Edit | Find | Find Usages

This section describes the controls for specifying Method Usage Search options in the **Find Usages** dialog box.

Item	Description
Find	<p>In this area, specify the objects to search.</p> <ul style="list-style-type: none"><li>■ <b>Usages</b> - if this check box is selected, the search is performed for all references of the method by its name.</li><li>■ <b>Overriding methods</b> - if this check box is selected, the search is performed for all methods that override the selected method.</li><li>■ <b>Implementing methods</b> - if this check box is selected, the search is performed for all methods that implement the selected method.</li></ul>
Search for text occurrences	Select this check box to have text contents and comments involved in searching.
Skip results tab with one usage	Select this check box to be navigated directly to the found usage without the <b>Find</b> tool window displayed, when only one usage is found.
Scope	In this area, specify the <b>scope</b> of search. Select a pre-defined scope from the drop-down list or click the <b>Browse</b> button  to open the <b>Scopes</b> dialog box, where you can define a custom scope.
Open in new tab	Select this check box have the results of each search shown in a separate tab of the <b>Find Results</b> window. If the check box is cleared, the search results will overwrite the contents of the current tab.
