

## Folding and Expanding Code Blocks

---

Code blocks have folding toggles at the right edge of the gutter next to each block. When a block is folded, the toggle  appears to the left of the first line of the block. When a block is expanded, the toggle  is shown at the beginning of the block and  at its end.

Folding and expanding code blocks works for entire classes, inner and anonymous classes, method bodies, import lists, comments, HTML and XML tags , closures and language injections .

**To fold or expand a block of code, do one of the following**

- Click the toggles  or .
- Place the caret within the desired block, and choose **Code | Folding | Collapse** or **Code | Folding | Expand** on the main menu, or just press `Ctrl+Plus/Minus` .

**To fold or expand all blocks in a file, do one of the following**

- On the main menu, choose **Code | Folding | Collapse All** or **Code | Folding | Expand All**.
- Press `Ctrl+Shift+Plus/Minus` .

Pressing `Ctrl+Shift+Plus` once expands all blocks except the imports list. Repeating the keystroke expands the imports.
