

Generate JavaDoc Dialog

Tools | Generate JavaDoc

Item	Description
Whole project	Click this option to have JavaDoc generated for the entire project. This option is chosen by default if no package is selected in the Project View .
Package	Click this option to have JavaDoc generated in a particular package. This option is chosen by default, if a specific package is selected in the Project View or the focus is in the editor.
Include subpackages	Select this check box to have JavaDoc generated for the nested packages. <div style="border: 1px solid gray; padding: 5px; margin-top: 10px;">The check box is available only when the Package option is selected.</div>
Output directory	In this text box, specify the fully qualified path to the directory where the generated documentation will be stored. Type the path manually or click the Browse button  to open the Select Path dialog box where you can select the desired location. The specified value is passed to the <code>-d</code> parameter of the JavaDoc utility. If the specified directory does not exist in your system, you will be prompted to create it.
Slider	In this area, specify the visibility level of members to be included in the generated documentation. The available options are: <ul style="list-style-type: none">■ Private - select this level to have all classes and members included. The level corresponds to the <code>-private</code> JavaDoc parameter.■ Package - select this level to have all classes and members except private ones included. The level corresponds to the <code>-package</code> JavaDoc parameter.■ Protected - select this level to have only public and protected classes and members included. The level corresponds to the <code>-protected</code> JavaDoc parameter.■ Public - select this level to have only public classes and members included. The level corresponds to the <code>-public</code> JavaDoc parameter.
Generate hierarchy tree	Select this check box to have the class hierarchy generated. If this check box is cleared, the <code>-notree</code> parameter is passed to JavaDoc.
Generate navigator bar	Select this check box to have the navigator bar generated. If this check box is cleared, the <code>-nonavbar</code> parameter is passed to JavaDoc.
Generate index	Select this check box to have the documentation index generated. If this check box is cleared, the <code>-noindex</code> parameter is passed to JavaDoc.
Separate index per letter	Select this check box to have a separate index file for each letter generated. If this check box is cleared, the <code>-splitindex</code> parameter is passed to JavaDoc. <div style="border: 1px solid gray; padding: 5px; margin-top: 10px;">The check box is available only if the Generate index check box is selected.</div>

Item	Description
@use	Select this check box to have the use of class and package documented. When selected, the check box corresponds to the <code>-use</code> JavaDoc parameter.
@author	Select this check box to have the <code>@author</code> paragraphs included. When selected, the check box corresponds to the <code>-author</code> JavaDoc parameter.
@version	Select this check box to have the <code>@version</code> paragraphs included. When selected, the check box corresponds to the <code>-version</code> JavaDoc parameter.
@deprecated	Select this check box to have the <code>@deprecated</code> information included. When the check box is cleared, the <code>-nodeprecated</code> parameter is passed to JavaDoc.
deprecated list	Select this check box to have the deprecated list generated. When the check box is cleared, the <code>-nodeprecatedlist</code> parameter is passed to JavaDoc. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;">The check box is available only if the @deprecated check box is selected.</div>
Locale	In this text box, type the desired locale.
Other command line arguments	In this text box, type additional arguments to be passed to JavaDoc. Use the command line syntax.
Maximum heap size (Mb)	In this text box, type the maximum heap size in Mb to be used by Java VM for running JavaDoc.
Open generated documentation in browser	Select this check box to have the generated JavaDoc automatically opened in the browser.
