

Generate Skeleton PHPUnit Test Case Dialog

The dialog box and the menu item are available only when the [Skeleton Generator](#) tool is installed and [enabled](#) in the project.

Use this dialog box to specify the name and location of a PHPUnit test generated on the basis of an existing PHP class.

Item	Description
Output test class name	This In this text box, type the name to assign to the test class that will be generated. By default, IntelliJ IDEA suggests the following name: <class for which the test is generated>Test.
Output file name	In this text box, type the name of the file that will contain the generated class. By default, IntelliJ IDEA suggests the following name: <output test class name>.php.
Output Directory	In this text box, specify the path to the directory, where the generated unit test class will be stored. By default, IntelliJ IDEA suggests the current directory. Accept the suggestion or specify another location. Type the path manually or click the Browse button  and select the desired folder in the Choose Test Directory dialog box that opens.
