

Generating Ant Build File

IntelliJ IDEA provides the possibility to automatically generate Ant build files for a project, or several build files per each module comprising the project. Once the build file is generated, it is automatically added to the [Ant Build tool window](#). You can edit and manage such build file as a regular file.

To generate Ant build file

1. On the main menu, choose **Build | Generate Ant Build**.
2. In the [Generate Ant Build dialog](#), specify the generation options.
 - Choose to generate a single-file or multiple-file build.
 - Choose to preserve or overwrite the previously generated files.Refer to the topic [Generate Ant Build Dialog](#) for detailed description of controls.
3. Click **OK**.
