

Generating Groovy Documentation

IntelliJ IDEA provides a front-end to the standard GroovyDoc utility for generating GroovyDoc reference for your Groovy-enabled project. This feature is available when the editor has the focus.

To generate Groovy project documentation

1. On the main menu, choose **Tools | Generate GroovyDoc**. [Generate Groovy Documentation](#) dialog box opens.
2. In the Generate GroovyDoc dialog, specify the input and output directories, and the visibility level. Refer to [Generate Groovy Documentation](#) for description of controls.
3. Click **Start**.
