

Generating main() Method. Example of Applying a Simple Live Template

As an example of applying a simple live template, let us create a main() method.

To create main() method

1. [Open](#) the desired class for editing.
2. Type the abbreviation of the main() method template:

```
psvm
```

3. Press the template invocation key. By default, it is Tab. The abbreviation expands to the main() method:

```
public static void main(String args[]) {  
    |  
}
```
