

Hibernate

IntelliJ IDEA provides support for [Hibernate](#) by means of a dedicated Hibernate facet. Hibernate support involves automatic creation of a specific module structure, code completion, syntax and error highlighting, code inspections and quick-fixes, refactorings, and the possibility to graphically represent data structure.

In this part:

- [Enabling Hibernate Support](#)
- [Creating Session Factory](#)
- [Creating and Editing Relationships](#)
- [Creating Hibernate Elements in a Session Factory](#)
- [Creating Fields in Hibernate Elements](#)
- [Navigating to Underlying Code](#)
- [Working with the Hibernate Console](#)

To learn how to generate persistence mappings, see sections [Generating Persistence Mappings](#) and [Mapping by Database Schema](#).
