

Import Existing Sources. Project Name and Location

Specify the project name and location.

| Item | Description |
|------------------|---|
| Project name | Specify the name of the project to be created. |
| Project location | <p>Specify the path to the directory in which your sources, libraries and other assets of interest are located.</p> <p>You can click  (Shift+Enter) and select the necessary directory in the dialog that opens.</p> <p>Note that the specified directory will act as the project root directory. (In technical terms, this is where the <code>.idea</code> directory will be created. For more information, see Project format and files and Directory-based format.)</p> |
