

## Import from Gradle. Page 1

Item	Description
Gradle project	Specify the address of the <code>build.gradle</code> file of the project you want to import. Type the path manually, or click the browse button  and locate the desired file in the file chooser dialog.
Gradle home	By default, IntelliJ IDEA displays the path to the Gradle installation, as defined in the <code>GRADLE_HOME</code> environment variable, or specified as the <a href="#">Gradle home project setting</a> .  If the path is unknown, or you want to use a different Gradle installation, click the browse button  and locate the desired directory in the path chooser dialog.
