

Import Project or Module Wizard

From the Welcome screen (if no project is currently open): **Import Project**

File | Import Project

File | Import Module

From the **Project Structure** dialog: **Modules | + | Import Module**

Use this wizard to import existing sources into IntelliJ IDEA and, as a result, to create a new [project](#) (**Import Project**) or to add a [module](#) (or a number of modules) to an existing project (**Import Module**).
