

Improving Stepping Speed

To improve stepping speed, follow these recommendations

- Turn off **Alternate view for Collections classes** by clearing the **Enable alternative view for Collections classes** check box at the [Data Views](#) page of the [Debugger](#) settings.
- Turn off 'ToString' mode on the IDE level, by clearing the **Enable 'toString' object view** check box at the [Data Views](#) page of the [Debugger](#) settings.
- Simplify conditions for breakpoints and watchpoints, especially frequently hit ones.
- Use filters (e.g., for class instances).
- During the debugging session, switch to a view with fewer elements.
