

# Inline Method

---

Refactor | Inline

**Inline Method** refactoring results in placing method's body into the body of its caller(s). You can opt to:

- inline all occurrences of the method, and delete the method
- inline only a single occurrence, and retain the method

Item	Description
Inline all invocations and remove the method	Select this radio button to replace all the method calls with its code and remove the method.
Inline this invocation only and keep the method	Use this option to replace only the current method call.
Search in comments and strings	Check this option to apply the changes to comments and strings.
Search for text occurrences	Check this option to apply the changes to non-java files (such as documentation, HTML, JSP and other files included in the project).
