

Installing, Updating and Uninstalling Repository Plugins

To be able to use [repository plugins](#), you have to download and install such plugins first. After that, you get the ability to update these plugins when appropriate.

When a repository plugin becomes unnecessary, you can [disable](#) or uninstall it.

- [Updating a repository plugin](#)
- [Uninstalling a repository plugin](#)

To download and install a repository plugin

1. [Open the Settings dialog](#).
2. In the left-hand pane, under **IDE Settings**, select **Plugins**.
3. On the [Plugins page](#) that opens in the right-hand part of the dialog, click the **Browse repositories** button.
4. In the [Browse Repositories dialog](#) that opens, select the required plugin and do one of the following:
 - Click  on the dialog toolbar.
 - Select **Download and Install** from the context menu.

Note that when looking for the plugin of interest, you can filter the plugin list by [category](#) and also to perform a [search](#).

5. Confirm your intention to download and install the selected plugin.
6. Click **OK** in the **Browse Repositories** dialog.
7. Click **OK** in the **Settings** dialog and restart IntelliJ IDEA for the changes to take effect.

Note that the plugin you have installed is automatically enabled. If necessary, you can disable it as described in [Enabling and Disabling Plugins](#).

To update a repository plugin

1. [Open the Settings dialog](#).
2. In the left-hand pane, under **IDE Settings**, select **Plugins**.
3. The [Plugins page](#) opens in the right-hand part of the dialog. Repository plugins that have newer versions available are [highlighted blue](#). (You may want to click  to update the plugin statuses.)

Select the necessary plugin and do one of the following:

- Click  on the page toolbar.
 - Select **Update Plugin** from the context menu.
4. Click **OK** in the **Settings** dialog and restart IntelliJ IDEA for the changes to take effect.

To uninstall a repository plugin

1. [Open the Settings dialog](#).
2. In the left-hand pane, under **IDE Settings**, select **Plugins**.
3. On the [Plugins page](#) that opens in the right-hand part of the dialog, select the repository plugin to be uninstalled and do one of the following.
 - Click  on the page toolbar.
 - Select **Uninstall** from the context menu.
4. Confirm your intention to uninstall the selected plugin.
5. Click **OK** in the **Settings** dialog and restart IntelliJ IDEA for the changes to take effect.
