

Knopflerfish Framework Integrator

The *Knopflerfish* framework integrator provides integration for *Knopflerfish*.

The *base directory* for Knopflerfish framework instances is the installation folder of Knopflerfish. This installation folder should contain a `knopflerfish.org` folder, which in its turn should contain an `osgi` folder.

The integrator searches for bundles in the *JARs* in the child folder and for the matching sources in bundles.
