

Live Edit

File | Settings | Live Edit

The page is available only when the *LiveEdit* repository plugin is downloaded, installed, and enabled.

Use this page to enable and disable instant preview of HTML, CSS, and JavaScript files in the actual browser and configure the appearance of the preview.

Item	Description
Enable live editing	Select this check box to enable instant preview of HTML, CSS, and JavaScript files in the actual browser without refreshing the corresponding pages.
Highlight current element in browser	When this check box is selected, the browser highlights the area that represents the code you are currently editing in IntelliJ IDEA.
