

## Logs Tab

---

The **Logs** tab is available, if [logging](#) has been activated in the current Run/Debug configuration. This tab is named after the log file. If there are multiple log files enabled for a run/debug configuration, the tab's name is composed of all the log file names delimited with the "|" characters; so doing, each specific log is displayed in its own tab:

### Log level

The logs can contain messages of the following types:

- All
- information
- warnings
- errors

Use the drop-down list of available message types to filter the log output and navigate through the messages.

### Search

Use the text field to type a string to find, and press Enter to start the search.

Click  to reveal to history of searches.

Click  to clear the text field.
