

Monitoring and Managing Tests

Test progress and results display in the dedicated [test runner tabs](#) of the **Run** tool window.

You can [rerun](#), [terminate](#), and [suspend](#) execution of tests same way as you do it for running applications. In addition to the common running actions, in the test runner you can:

- Navigate through the list of test cases using arrow keys.
- Navigate between failed tests using the [↓](#) and [↑](#) buttons or [Ctrl+Alt+Up](#) or [Ctrl+Alt+Down](#) keyboard shortcuts.
- View the total number of tests being run in the current session. The summary information is displayed in a message line on the top of the tool window. After completion of the tests, the message informs you about the number of failed tests and elapsed time.
- View testing progress in the progress bar.
- Show or hide information about the passed tests, using the [🏆](#) button.
- Navigate from the stack trace to the problem location in the source code by clicking the hyperlink in the **Output** pane.
- Enable and disable the following functionality by clicking the cog button [⚙️](#) and selecting the relevant items from the context menu:
 - Monitoring execution of the current test.
 - Have the first failed test selected automatically upon completing the suit.
 - Navigating to the stack trace.
 - Automatic scrolling to the source code.
 - Have the corresponding source code opened at exceptions.
 - Have statistic shown in the **Statistics** pane.
