

Move File Dialog

Refactor | Move

F6

The **Refactor | Move** menu command invokes one of the following dialog boxes depending on the selected item to be moved:

- The *Move File* dialog box is invoked when a file is selected in the [Project](#) tool window or opened in the editor.
- The *Move Directory* dialog box is invoked when a directory is selected in the **Project** tool window.

Item	Description
To directory	Specify the destination directory. Type the path manually or click <input type="button" value="..."/> and select the target directory in the dialog that opens .
Search for references	Select the check box to find and update the references to the file or directory being moved.
