

Navigating to Custom Region

Once custom regions are defined, IntelliJ IDEA provides navigation between custom regions. Note that custom regions should be created in one style, as described in the section [Folding Custom Regions with Line Comments](#).

To navigate between custom regions

1. Do one of the following:
 - On the main menu, choose **Navigate | Custom Region**.
 - Press **Ctrl+Alt+Period**.
2. In the dialog box that opens, select the target custom region, and click **OK**:

The caret rests at the comment line opening the region in question.
