

Navigating to Line

Navigate | Line command is the most basic way to navigate to the line with the specified number.

To navigate to a line in the editor

1. On the main menu, choose **Navigate | Line**, or press **Ctrl+G**.
2. In the **Go To Line** dialog box that appears, IntelliJ IDEA shows the current line and offset delimited by a colon. Type the target line number and, optionally, an offset, and then click **OK**.

The current caret position (line number and offset) is displayed in the [Status Bar](#). You can click it to open the **Go To Line** dialog box.
