

New Action Dialog

Project tool window | Context menu of the target package | New | Action
Alt+Insert

Use this dialog to create a new action with the specified identifier, and optionally bind it with a keyboard shortcut that can consist of one or two keystrokes.

Item	Description
ActionId	In this text field, type the identifier of the new action.
Class name	In this text field, specify the name of the class where the new action will be defined. The created stub class contains import statements, and extends <code>AnAction</code> .
Name	Specify the name that will identify the new action in the UI.
Add to Group	In this section, select a group where the action will belong (Groups section), and specify its position (Anchor) relative to the other actions in this group (Actions).
Keyboard shortcuts	<p>In the two text fields below, specify the optional primary and secondary keyboard shortcuts, by pressing keyboard keys and their combinations.</p> <div style="border: 1px solid orange; padding: 10px;"><p>If you opt to specify the keyboard shortcuts, it is important to use the mouse pointer for clearing the keyboard shortcuts text fields, applying changes and closing the dialog box, because any keystroke will be interpreted as a shortcut.</p></div>
