

Output Filters Dialog

File | Settings | IDE Settings | External Tools

The dialog box opens when you click the **Output Filters** button in the [Edit Tool](#) dialog box. In this dialog box, manage the list of filters to distinguish the output of a specific external tool from other output. Based on these filters, IntelliJ IDEA displays paths to the tool's output files as links in error and other messages and logs. When you click such link, the corresponding file is opened in the editor.
