

Pausing and Resuming the Debugger Session

When a breakpoint is hit, or when a running thread or an application is paused manually, the debugging session is suspended.

To pause the debugger session, do one of the following

- On the main menu, choose **Run | Pause Program**.
- Click  on the Debug toolbar.

To resume the debugger session, do one of the following

- On the main menu, choose **Run | Resume Program**.
- Click  on the Debug toolbar.
- Press F9.
