

## Post-Processing Tab

---

In this tab, specify the additional activities to be performed after the artifact is built.

For the details on common options, click [here](#).

Item	Description
Run Ant Target	Select this check box to have an Ant target executed upon the artifact build.
	Click this button to open the <b>Choose Ant Target</b> dialog box, where you can select the Ant target to run.
Properties	<p>The table in this area specifies the properties that will be passed to the Ant target selected above.</p> <p>If you have to perform similar actions for the various artifacts, you don't need to create individual Ant targets for each one. Instead, in the <b>Properties</b> table, you can specify the properties; in the different artifacts, you can specify the different values for these properties.</p> <p>The first property, which is defined by default, is <code>artifact.output.path</code>. This property is pre-defined, and not editable; its value is taken from the artifact setting.</p> <p>The other properties are defined by the user, and can take any relevant string values.</p>
Add	Click this button to create a new editable line in the <b>Properties</b> table. Specify the property name and value.
Remove	Click this button to delete the current entry from the <b>Properties</b> table.
