

Processing Annotations

When processing annotations is [enabled](#), a dedicated annotation processing command appears in the **Build** menu, and on the context menu of a class with annotations in the editor and in the Project tool window.

To process annotations, follow these general steps

1. Make sure that the class with annotations you are working with belongs to a [profile](#) with enabled annotation processing.
2. Do one of the following:
 - Right-click the class in question in the Project tool window, or open it in the editor, and choose **Process <class name.java> Annotations** on the context menu.
 - On the main menu, choose **Build | Process <class name.java> Annotations**
 - Press RunAPT.
3. Explore results in the directory defined in the [Annotation Processors](#) page.
