

# Publishing a Project on GitHub

---

You can [publish your project sources](#) in a GitHub Repository right from IntelliJ IDEA.

Make sure that you have [registered your GitHub account credentials](#) in IntelliJ IDEA.

## To publish your project sources on GitHub

1. On the main menu, choose **VCS | Import into Version Control | Share Project on GitHub**.
  - If you [have registered login and password](#), IntelliJ IDEA establishes connection with GitHub using these credentials.
  - If you have not registered your GitHub credentials in IntelliJ IDEA, the [Login to GitHub](#) dialog box. Specify your GitHub login and password or create an account there.
2. Upon establishing connection, the [Share Project on GitHub](#) dialog box opens. Specify the name of the repository to store your project sources in. By default, IntelliJ IDEA suggests the name of the current project. Provide a brief description of the project functionality.  
  
Click the **Share** button. IntelliJ IDEA initiates creation of the new repository on the GitHub and [uploads the project sources](#) to it.
