

Push Rejected Dialog (Git)

VCS | Git | Push

The dialog box opens when [pushing a branch](#) is rejected due to lack of synchronization between your local repository and the remote storage. Use this dialog box to have IntelliJ IDEA update the local branch using [rebase](#) or [merge](#) and to configure automatic update of conflicting branches in the future.

Item	Description
Update not rejected repositories as well	<ul style="list-style-type: none">■ Select this check box to have all the local repositories updated, no matter whether push has been rejected for all of them or not.■ When this check box is cleared, IntelliJ IDEA will update only the repositories for which push was rejected. <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;">The check box is available only if your project uses several repositories.</div>
Remember the update method choice and silently update in future	<p>When this check box is selected, IntelliJ IDEA saves the update method <code>rebase</code> or <code>merge</code> invoked by pressing the corresponding button and will apply it to update the conflicting local branch silently.</p> <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;">After you leave the dialog box, the Auto-update if push ... rejected check box in the Git page of the Settings dialog box is selected and the applied update method becomes default. To change this setting, clear the Auto-update if push ... rejected check box.</div>
Merge	Click this button to have the conflicting branch updated using <code>merge</code> .
Rebase	Click this button to have the conflicting branch updated using <code>rebase</code> .
