

# Rename Servlet

---

## Web Module Editor - General - Servlet Initialization Params

---

The dialog opens when you select a servlet in the **Servlets Configured** pane and click **Rename Servlet** in the **Servlet Initialization Params** that opens.

Use this dialog to change the name of the selected servlet and update the `web.xml` descriptor accordingly.

Item	Description
Servlet Name	The text box displays the current name of the selected servlet. Use the text field to update the servlet name as necessary.
Refactor	Updates the <code>web.xml</code> descriptor according to the changes.
Preview	Opens the <a href="#">Refactoring Preview</a> window with all the occurrences of the selected servlet.
