

Resolving Dependencies

With IntelliJ IDEA Gradle integration, you can resolve the unsatisfied dependencies, which are defined in Gradle project only, or view differences between the dependencies that contain conflicts.

In this section:

- [Importing dependencies](#)
- [Exploring conflicts](#)

To import a missing dependency to IntelliJ IDEA project

1. In the [JetGradle tool window](#), right-click a dependency marked green.
2. On the context menu, choose **Import**.

The missing dependency is imported, and when ready, it is shown in black in the JetGradle tool window.

To explore conflicts

1. In the [JetGradle tool window](#), right-click a dependency marked red.
2. On the context menu, choose **Show conflicts**.

The conflicting components are shown in a tooltip.
