

Resolving Property Conflicts

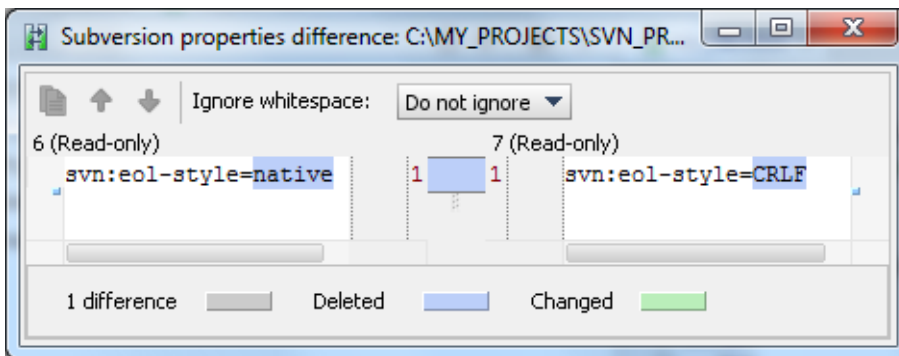

A *property conflict* is reported during synchronization with the server when IntelliJ IDEA detects differences between the properties of a local file or folder and their version on the server. IntelliJ IDEA does not attempt to resolve property conflicts automatically and displays the files and folders with such conflicts under the **Merged with property conflicts** node in the [Update Info](#) tab of the [Version Control](#) tool window. You have to resolve property conflicts manually and then tell IntelliJ IDEA to treat the corresponding files and folders as conflict-free.

In this section:

- [Resolving a property conflict](#)
- [Marking a file as resolved](#)

To resolve a property conflict

1. Open the **Changes** tool window and switch to the [Repository](#) tab.
2. In the [Changed Files](#) pane, select the conflicting file.
3. Choose **Properties Diff** on the context menu of the selection or click  on the toolbar.
4. In the **Subversion properties difference** viewer, explore the differences:

5. Based on the detected discrepancies, [update the properties](#) so the conflict is resolved.

To mark a file as resolved

1. In the [Update Info](#) tab of the [Version Control](#) tool window, select the fixed file under the **Merged with property conflicts** node.

As you can see, the file is still displayed in red as conflicting.

2. On the context menu of the selection, choose **Subversion**, and then choose **Mark Resolved**. When the dialog box is closed, the **Local** tab of the **Changes** tool window shows the affected files as updated. and available for checking in to the server.
3. [Check in](#) the resolved files.
