

Running and debugging Java mobile applications

To be able to run or debug your Java mobile application you should first create the corresponding run/debug configuration. Then, you should start this run/debug configuration in the run or the debug mode.

- [Creating a J2ME run/debug configuration](#)
- [Starting a J2ME run/debug configuration](#)

To create a J2ME run/debug configuration

1. Select **Run | Edit Configurations**.
2. In the [Run/Debug Configurations dialog](#), click **+** and select **J2ME**.
3. Specify the configuration settings as necessary and click **OK**. For more information, see [Run/Debug Configuration: J2ME](#).

To start your J2ME run/debug configuration

1. Make sure that the run/debug configuration for your mobile application is selected in the corresponding selector on the toolbar.
2. Now, to start this configuration in the run or the debug mode:
 - Select **Run | Run** or press **Shift+F10**.
 - Select **Run | Debug** or press **Shift+F9**.
