

Running Builds

Phing functionality in IntelliJ IDEA is provided through a dedicated [Phing Build](#) tool window.

In this section:

- [Accessing the Phing Build tool window](#)
- [Running builds](#)
- [Running separate build targets](#)

To open the Phing Build tool window, do one of the following

- If the Phing support is not [enabled in the project](#), open a Phing build file in the editor or select it in the [Project](#) tool window, and then choose **Add as Phing build file** on the context menu of the selection.
- If Phing is supported at the project level, choose **View | Tool Windows | Phing Build** on the main menu.

To run a build file

1. [Open the Phing Build](#) tool window.
2. Select the required build file in the list and click the **Run** button  on the toolbar or choose **Run Build** on the context menu of the selection.

To run a build target, do one of the following:

- In the [Phing Build](#) tool window, select the required build target in the list and click the **Run** button  on the toolbar or choose **Run Target** on the context menu of the selection.
- Use the [shortcut associated with the target](#).
