

Running/Debugging Mobile Application

Before you can run/debug your Mobile application, you need to set up Run/Debug configuration for it. This section describes how to create run configuration and run/debug the mobile application.

To create j2me run/debug configuration

1. On the main menu, choose **Run | Edit Configurations**.
2. In the [Run/Debug Configuration dialog](#), click the plus button, or press Insert, and select **J2ME**.
3. Specify Configuration name and needed options. Configuration options depend on the Mobile SDK used, they are described in detail [here](#). Click **OK**.

To run/debug mobile application

1. Create Run/Debug Configuration as described above.
2. To run the J2ME application select **Run | Run** from the main menu, or press **Shift+F10**. To debug the J2ME application, select **Run | Debug** from the main menu, or press **Shift+F9**.
