

Running Grails Targets

IntelliJ IDEA enables launching targets in the Grails or Griffon applications. When Grails or Griffon application is selected, the respective **Run target** command appears in the **Grails** or **Griffon** nodes of the main **Tools** menu.

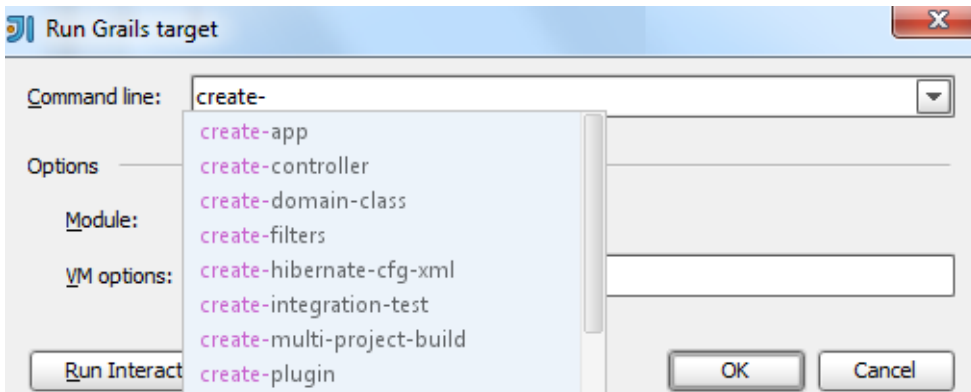

To run a grails or griffon target

1. Select Grails or Griffon application module. You can do this in a number of ways:
 - In the Project tool window, select module of the corresponding type.
 - Bring forward [Grails View](#) or [Griffon View](#) tool window.
 - Open in the editor the desired file that pertains to a Grails or Griffon application.
2. On the **Tools** menu, choose **Grails | Run Grails Target** or **Griffon | Run Griffon Target**:

Alternatively, just press **Ctrl+Alt+G**.

3. In the dialog box that opens, start typing the target name, and press **Ctrl+Space** to show the list of matching targets:

4. Click **OK**, and view the output messages in the console.

Please note the following:

- The history drop-down list is available in the RunTarget dialog box. Use the arrow keys to browse through the recently executed targets.
- You can run or debug any target immediately from the Run/Debug configuration, if you enter an arbitrary command in the **Command line** field of the Run/Debug Configuration dialog.
