

Schemas and DTDs

File | Settings | Schemas and DTDs

Use this page to map URIs of external resources with local files and create a list of URIs that should not be highlighted as errors.

Item	Description
Configure External Resources	In this area, map URIs with files and folders.
URI	This read-only field shows the URI of the resource.
Location	This read-only field shows the full path to the resource.
Project	Check this option, if the selected mapping should be used within current project only. If box is cleared, this mapping is available in all projects.
 (Alt+Insert)	Use this icon or shortcut to open the External Resource dialog box, where you can create mapping between a URI and a file or a folder.
 (Enter)	Use this icon or shortcut to open the External Resource dialog box, where you can edit selected mapping.
 (Alt+Delete)	Use this icon or shortcut to remove the selected URI from the list.
Configure Ignored Resources	In this area, create a list of resources that should be ignored. URIs from this list will not be highlighted as errors any more.
URI	This read-only field shows the URIs of resources to be ignored
 (Alt+Insert)	Use this icon or shortcut to open the External Resource dialog box, where you can specify URI of an ignored resource .
 (Enter)	Use this icon or shortcut to open the External Resource , where you can change URI of selected ignored resource.
 (Alt+Delete)	Use this icon or shortcut to delete the selected URI from the list. <div style="border: 1px solid #ccc; padding: 5px; margin-top: 5px;">The URI becomes available for mapping to a local file.</div>

Item	Description
Default HTML Language Level	<p>Select the language to be used for editing the HTML/XHTML files where doctype is not explicitly. These settings affect code completion, syntax and error highlighting etc. If Other doctype is selected, you have to specify the desired doctype same way as it is HTML files.</p> <p>Press Ctrl+Space to reveal the list of available doctypes.</p>
