

# SDKs. Flexmojos SDK

File | Project Structure | SDKs |  Flexmojos SDK

Ctrl+Shift+Alt+S

When importing a [Flexmojos](#) project, IntelliJ IDEA automatically creates a Flexmojos SDK that lets you launch the Flex compiler and debugger.

Use the **Flexmojos SDK** page to view and edit the Flexmojos SDK settings.

Item	Description
Name	Use this field to edit the name of the SDK.
Flex Compiler POM	In this field, the path to your compiler pom file is shown (readonly).
Flex Compiler/Debugger Classpath	In this area, the files included in the compiler shell classpath are shown (readonly).
AIR Debug Launcher	Specify the path to the adl.exe file.
AIR Runtime (directory or zip file)	Specify the path to the AIR runtime directory or archive.
