

Security Roles

[Web Tool Window](#) | [Context Menu of a Web module](#) | [Jump To Source](#) | [Assembly Descriptor References](#)

In this pane, define the `<security-role>` element that specifies a logical security role used in the Web application.

Based on the settings you specify in this pane, IntelliJ IDEA generates the properties of the `<security-role>` element in the `web.xml` descriptor.

Security roles are mapped to principals in the realm through the `<security-role-assignment>` element of the application-specific deployment descriptor.

Item	Property generated in <code>web.xml</code>	Description
Security Roles	<code><role-name></code>	In this field, specify the name of the security role.
		Click this button to open the Edit Security Role dialog box.
Description	<code><description></code>	In this field, provide a description of the role.
