

Sending Stacktraces

If you happen to get a stacktrace and wish to share it with your colleagues, IDEtalk helps you send it to the persons on your contact list.

To send a stacktrace

1. In the [Debug tool window](#) or [Console](#), select the text of a stacktrace.
2. Drag the stacktrace text to the IDEtalk contact list and drop it on the desired user name.
3. Click **Send**.

Alternatively, you can copy the stacktrace text and send it, as described in the section [Exchanging Instant Messages](#).
