

# Specifying Actions to Confirm

---

You can define that certain version control related activities should be performed only upon confirmation from your side. The activities for which confirmation is required are specified in the [Confirmation](#) settings page.

## To specify which actions should require confirmation

1. Below the [Version Control](#) node in the settings, select the [Confirmation](#) page.
2. In the **Files Creation/Deletion** area, define how files created or deleted in IntelliJ IDEA should be added to or removed from a version control system. The available options are:
  - Show options before adding to version control
  - Add silently
  - Do not add
3. In the **Display options dialog when these commands are invoked** area, specify the commands, for which you want IntelliJ IDEA to display the **Options** dialog box. The available options are:
  - Check Out
  - Status
  - Get Latest Version
  - Update
  - Undo Check Out
4. Configure additional settings for working with changelists by selecting or clearing the corresponding check boxes:
  - Specify whether the read-only state of files should require explicit cancellation.
  - Specify whether meaningful comments on committing files to the repository should be required.
  - Specify whether uncommitted changes should be moved to another changelist.
  - Specify whether and how to create a changelist if the commit operation fails.
