

Specifying the Servlet Name and the Target Package

To define the servlet name and the target package where the servlet will be created

1. Open the [New Servlet](#) dialog box from the [Project tool window](#).

Alternatively, open `web.xml` and switch to the [General](#) tab. Then click **+** in the **Servlets Configured** pane.

2. In the `<servlet-name>` text box, specify the root part of the new servlet name.
3. In the **Package** text box, specify the name of the target package where the new servlet will be generated. If necessary, use the  button. The [Choose Servlet Package](#) dialog box opens.
4. Select the relevant package or create a new one by clicking . Click **OK**. You return to the **New Servlet** dialog box.
5. In the **Servlet Class** text box, type the name of the class that implements the new servlet. If necessary, use the  button. The **Choose Servlet Class** dialog box opens.
6. Select the relevant class and click **OK**. You return to the **New Servlet** dialog box.
7. Click **OK**. The [General](#) tab with the [Servlet Initialization Params](#) pane displays.
8. Proceed with specifying the [initialization attributes](#) and the [context-initialization parameters](#) of the servlet.
