

Splitting Lines with String Literals

This feature is designed to correctly split string literals, providing the necessary quotation marks and plus signs.

To split a string literal into two parts

1. Set the caret in the string literal to be split.

```
31 |  
32 | System.out.println("Hello,| world!");  
33 |
```

2. Press Enter.

```
32 | System.out.println("Hello," +  
33 | " world!");
```
