

Subversion Working Copies Information Tab

View | Tool Windows | Changes - Subversion Working Copies Information

Use this tab to configure the format of your working copies.

The tab is only available, when the current project sources are entirely or partially under Subversion control.

The tab displays a list of all detected directories under Subversion control supplied with information on the formats used.

Item	Description
Refresh	Click this button to get the information on all the detected Subversion working copies up-to-date.
Root Path	This read-only field shows the full path to the directory.
URL	This read-only field shows the URL address of the remote directory the selected local copy is mapped to.
Format	This read-only field shows the actual Subversion format used in the selected directory.
Change	Click this link to open the Convert Working Copy Format dialog box, where you can select the desired format option.
Depth	This read-only field shows the range of recursion into subdirectories specified in the Update dialog box.
Working Copy Root	This read-only field is displayed only if the directory in question is the root of a working copy.
Configure Branches	Click this link to open the Configure Subversion Branches dialog box, where you can view and update the list of branches to work with.
Merge from	Click this link to open the Select Branch pop-up dialog box and appoint the source of changes to merge to the current directory.
