

Tapestry Facet Page

File | Project Structure | Modules - module - Tapestry facet

For this page to be available, the Tapestry Support [plugin](#) must be enabled.

Use this page to specify the [configuration settings](#) for your [Tapestry](#) application.

Item	Description
Filter Name	Specify the filter name for your application. By convention, the filter name is almost always <code>app</code> , but you can use any name you want.
Application Package	Specify the root package for your application.
