

# Tapestry View

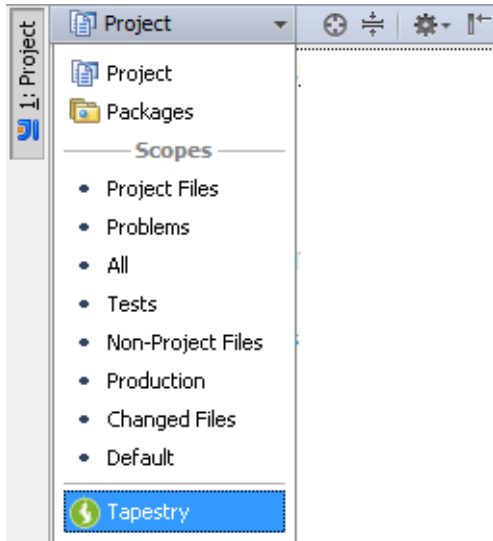

In this [view](#), you can browse your *Tapestry* application not in terms of classes and templates but in terms of pages, components, services, etc.

This section covers the following features:

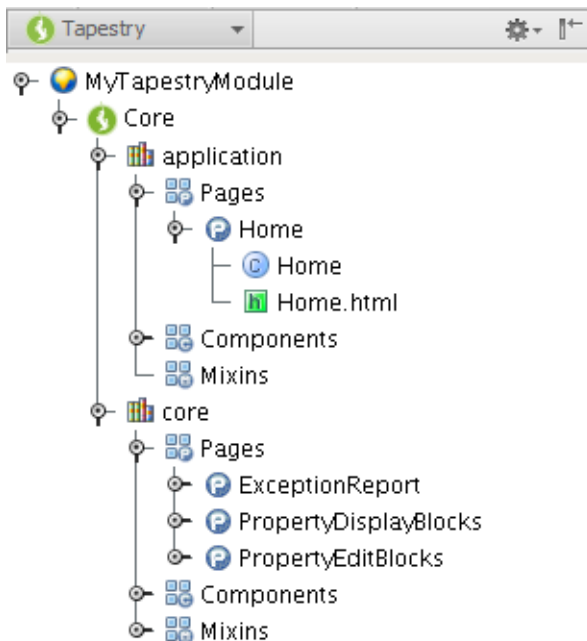

- [Drag-and-Drop](#)
- [Safe Delete](#)

## General description

This view is available to every project that has at least one web module with *Tapestry* support. It can be accessed like any other project view from the **View as** selection box.

The view lets you browse your *Tapestry* modules in a tree structure that shows you all *Tapestry* elements like pages and components.

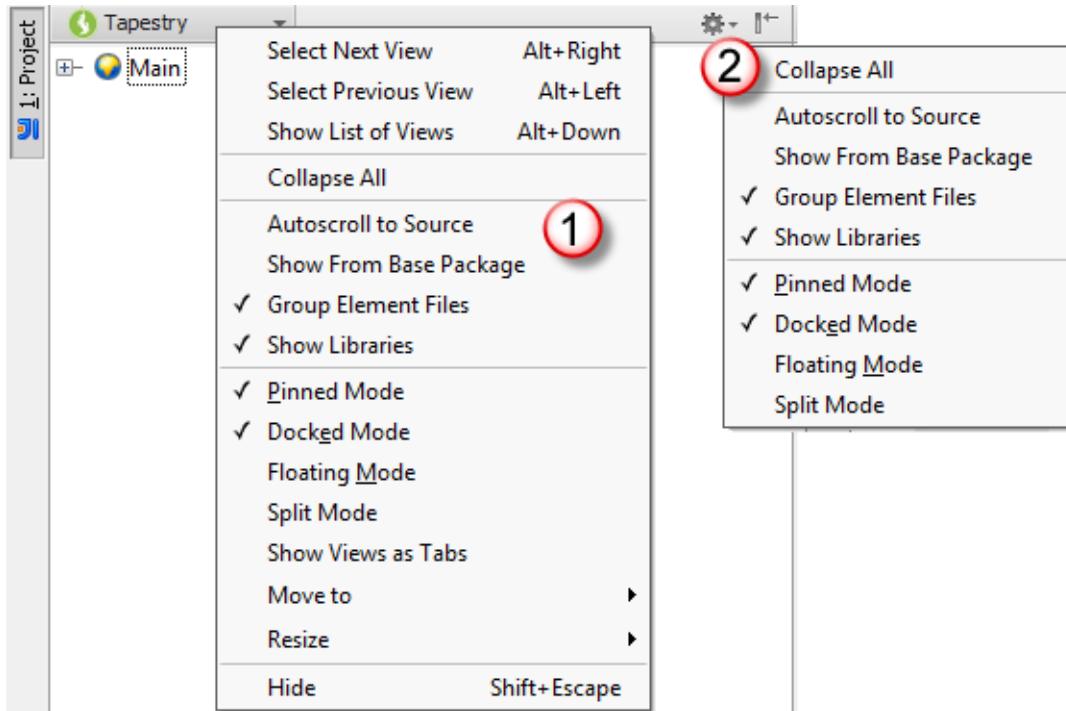

## Structured view of the application

Each element in the Tapestry View has a different icon so that it's easy to identify the type of element:

Library		<b>A Tapestry library.</b> By default you will have two library nodes, one for your application and the other of the provided core library.
Page		A Tapestry page. You can navigate to the page class or template from here.
Component		A Tapestry component. You can navigate to the component class or template from here.
Mixin		A Tapestry mixin. You can navigate to the mixin class from here.

The [title bar context menu](#) (1) provides additional functionality that will also help each user customize it's look&feel. Some options are also available from the list that opens when you click the  button (2).

Below is a description of menu items that are specific for Tapestry.

Item	Description
Show From Base Package	Only Show Content From the Application Base Package
Group Element Files	Group Element Files Like it's Class and Template in a Parent Node.
Show Libraries	Show/Hide Tapestry Libraries.
