

Tapestry

IntelliJ IDEA comes bundled with the Tapestry plugin that provides native support for developing Web applications based on the [Tapestry](#) framework. The plugin is by default enabled. If not, enable it in the [Plugin Configuration Wizard](#) or the [Plugins](#) page of the [Settings](#) dialog box.

IntelliJ IDEA allows you to quickly setup a running *Tapestry* project and provides several types of assistance in developing Web applications.

To use tapestry in developing a web application, perform these general steps

- [Enable Tapestry support.](#)
- [Create Tapestry-specific items:](#) pages, components, and mixins.
- [Examine the structure of your application in the Tapestry-specific terms.](#)
- [Edit the generated Tapestry templates.](#)
