

Toggle Case

To toggle between upper case and lower case

1. Select text fragment, or just place the caret at the line you want to change case in.
2. On the main menu, choose **Edit | Toggle Case**, or press **Ctrl+Shift+U**.

Using **Toggle Case** for CamelCase name format, converts the name format to lower case. The lowercase names are converted to uppercase format. If you use **Toggle Case** for uppercase name format, the name format is converted to lower case.
